

# Dr. Brownstein's Blog on Kathryn's Testimonial

## **There Is Still Hope Out There- Kathryn: "Right away the nebulizer started to open up my lungs."**

This is my patient, Kathryn, who was in the hospital for several days due to bilateral pneumonia. When she tested positive for COVID during her stay, Kathryn requested to go home as there was nothing the hospital could do aside from treat her with oxygen so she could breath. Learn about the natural therapies Kathryn received that helped build her immune system and helped her recover from her illness.

**Please know that my colleagues and I do not claim to have a cure for any illness.** However, we do make the claim that *we can give the patient a chance to recover by supporting the 'host' and supporting the terrain of the host.* The human body is designed wonderfully to fight back against illness. Kathryn's case is a perfect example. Watch her testimony and you be the judge.

David Brownstein, MD is a conventionally trained Board-Certified Family Physician with the additional overlay of holistic principles.

While Dr. Brownstein does not claim to have a cure for any illness, he does believe that we can enhance the individual's immune system by supporting the 'host' & the terrain of the host. The human body is well designed and the immune system, when given the proper support, can optimally function.
